

Processing with `pdf $\text{\LaTeX}$` : demand and test

Ernst Reissner (rei3ner@arcor.de)

2025-06-28

Tests magic comment: overwrite default $\text{\LaTeX}$ processor, which is `lualatex` by default, by `pdf $\text{\LaTeX}$` . If this does not work, an invisible `\GenericError` in an `\ifPDF $\text{\LaTeX}$` construction throws an error leading to an error return code of the late processor.

Here, it is tested that $\text{\LaTeX}$ processor is chosen correctly for compilation 'testProgramLatexmk' using latexmk.
